

Collaborative Partnership Outline

With the culmination of talent and expert ability between our respective companies in the different Oncology product service lines including but not limited to Linear Accelerator Hardware, Oncology Information Software, Radiation Physics and a World Class Oncology Clinical Helpdesk, we are proud to offer and delight our customers in being a seamless, multi-faceted Service & Medical Physics specialization collaborative for less money.

MISSION

Moonrise Medical Physics has a devoted group of board certified QMPs and Dosimetrists with a combined experience of almost 100 years. We are experts in creating a Culture of Safety centered on patient safety, radiation physics, and all types of external beam and brachytherapy treatment planning.

LE3 Engineering Services provides repair and maintenance of equipment used to administer radiation therapy, such as for cancer treatment. We recognize that uptime is extremely important in the treatment of patients, so our focus is on offering the highest quality of service to your team.

Radiology Oncology Systems has been providing affordable and high-quality refurbished radiation therapy and diagnostic equipment solutions to facilities and countries around the world while increasing access to health care treatments and services for over 20 years.

Dignatel Business Solutions is an Independent Software Service Organization providing proactive support options as an alternative to OEM vendor support. Our greatest service option is providing support to customers with products deemed discontinued or “end-of-life” by OEMs.
